

Clearer work. A sharper first impression.

Preserve the brand the owner approved. Make every service, interaction, and next step easier to understand.

Design and browser QA verified.

Inbound marketing still needs a public enquiry destination. The current contact flow prepares a download; it does not deliver a lead.

The recommended palette

Charcoal anchors the experience. Ivory creates reading space. Sage supports diagrams and proof. Bright green consistently means a primary action.

Motion with restraint

Natural scrolling, prompt navigation on scroll-up, a thin reading indicator and small section entrances. Subtle depth moves only the decorative outline behind the client story. Text stays flat and sharp.

Benchmark research: [O.C. Tanner](#) for hierarchy and photography; [Avathon](#) for operational focus. BundleBoB retains its own broad service positioning and real client story.

A service preview people can read.

The live page used a 3D transform on miniature text, even under reduced motion. The replacement is flat, semantic HTML with larger labels and one clear review state.

Before — angled preview, small labels and inconsistent primary-button green.

After — crisp diagram, readable hierarchy and the shared bright action color.

The visual explains a service. It is not presented as a screenshot of the client's delivered platform.

What is ready for the team.

Area	Delivered
Cards and typography	Flat service diagrams, cleaner photographs, no blur on workflow disclosures, paragraph spacing, About layout repaired.
Interaction	Correct carousel selection, stable walkthrough controls, mobile menu scroll lock and restore, scroll-up navigation.
Media	Lower films re-exported without baked-in text. 720p mobile hero ≈1.6 MB; lower films ≈1 MB each. Desktop hero preserved.
Proof and search	Real client story retained and linked from all services. Unique descriptions for 20 pages. Internal design pages excluded from production.
QA	80 page/layout combinations; 96 links; 48 accessibility scans plus eight finishing checks. Targeted interactions at 320–1440px. No reported browser errors.

Preserve the owner’s decisions

No invented client results, product screenshots, testimonials, or legal details. No restored visible film buttons. Reduced-motion and data-saving settings remain respected. Automated scans are not a full accessibility-conformance assessment.

Before sending paid or outbound traffic

Supply a monitored business email or booking URL, then configure and test the contact destination. Legal business name/location and privacy contact also need owner confirmation.

Testing limits

Mobile checks used Chromium emulation, not physical iOS Safari or Android hardware. No enquiry was transmitted. The full decision record is in docs/marketing-handoff.md; browser evidence is in audit/owner-review/.
