

A clearer brand. A better working day.

A visible new direction for people who want less paperwork, connected teams and tools that fit their business.

Updated design — review preview

[Open the branch preview](#) · [PR #41](#)

Production changes after merge and deployment.

The O.C. Tanner palette direction

Black anchors navigation. Off-white gives content room. Orange marks actions and progress; purple distinguishes the workflow and client proof. White actions stay clear on dark photography.

A new mark and a better fit

Three bundled work cards replace the block B. The lowercase wordmark stays readable at small sizes, with a matching favicon and social share image. The desktop menu is capped at 1,180px and reduced to 76px high.

Reference: [O.C. Tanner](#) for visual direction; [Avathon](#) for operational context. BundleBoB keeps its own service positioning and genuine client story. Typography: locally hosted Outfit.

A change people can see.

Compact black navigation, original bundled-work logo, and direct business language.

Requests, approvals and updates rotate into a shared flow as the visitor scrolls.

Motion that follows the visitor

Desktop uses a sticky scene with native page scrolling. Mobile keeps the content in a natural vertical layout. Reduced-motion preferences remove the transforms and sticky treatment. No WebGL or continuous rendering loop.

These cards explain the working approach; they are not screenshots of the client's software.

Clear pictures. Clear next steps.

Photography above solid text panels. Simple choices: cut paperwork, build better tools, connect your systems.

- Responsive checks span ten widths, 320–1,920px, including menu behavior, service selection and reduced motion.
- Full site checks cover 20 pages, local links, keyboard interactions, contact preparation and browser errors. See **docs/verification.md** for results.
- The real mechanical/HVAC client story remains intact. Construction demonstrates capability within a broader service business.

Before promoting the site as an inbound lead channel

Supply a monitored email or booking URL and test the destination. The current contact flow prepares a download; it does not send a lead. Legal name/location and privacy contact still need owner confirmation.

Testing limits

Mobile browser checks use Chromium emulation, not physical iOS or Android devices. Automated accessibility scans do not establish full conformance. No enquiries were transmitted. Full decisions: docs/marketing-handoff.md.
